

SukaSeafood

Saving our seafood, from **boat to bowl.**

Helping Malaysian seafood consumers make
better-informed, sustainable choices
at the point of purchase.

FIT5120 | Team 15 | 47°

Proposal to Industry Mentor

THE PROBLEM IS REAL

Saving our seafood, from boat to bowl

88%

decline in demersal fish biomass/density. Impacts 120,000+ fishers/farmers.

WWF Malaysia

90%

decline in fish stocks in some Malaysian fishing areas.

Focus: Consumer choices influence demand.

Zone 3: Academic Data

2025 Study:

73%

of surveyed consumers willing to pay a premium for MyGAP-compliant farmed fish.

Barriers to entry from 250-consumer study:

Literacy

Accessibility

Affordability

Zone 4: ABC News (Australia)

Want to buy sustainable seafood?

Validates the broader, global consumer decision problem at the counter.

Sources:

TheStar The Star

ABC News (Australia)

Academic Research (2025)

"I want to make the better choice..."

"How do I know which fish is actually better?"

Confused / uncertain / time-pressured

Checks price → relies on familiarity → purchases

The 4Ws

WHO: Everyday Malaysian seafood consumers.

WHAT: Lack convenient decision support connecting seafood identity, sustainability, price, and alternatives.

WHERE: At the point of purchase.

WHY: Relevant information exists, but it is fragmented and disconnected from the decision.

Malaysian seafood consumers lack convenient, point-of-purchase decision support that connects seafood **identity**, **sustainability** and **price context**, making it difficult to turn awareness of fisheries and ecosystem pressures into **affordable, more sustainable purchasing choices**.

USER JOURNEY & THE GAP

1 ENTER
I need seafood.

2 SEE
Which one?

3 IDENTIFY
What fish is this?

4 UNDERSTAND
Is it sustainable?
Why?

5 CHECK
Is the price reasonable?

6 DECIDE (THE GAP)
Which choice is better?

Too much information

Hard to compare

Information is fragmented

7 PURCHASE

SukaSeafood intervenes here.
We connect identity, sustainability, price and alternatives—so you can make the better choice.

Clear information

Easy comparison

Better choices

ITERATION 1 – OVERVIEW

Turning the seafood decision into a connected experience

IDENTIFY

What fish is this?

Data: Fish-Vista +
Malaysian species mapping

Computer vision model
identifies fish species

Supports local names
and synonyms

Provides detailed
information about the fish

PRICE & SUPPLY

Is this price reasonable?

Price Data: OpenDOSM
PriceCatcher

Supply Data: OpenDOSM
Fish Landings

Latest observed price
from PriceCatcher

Marine fish landings
by state

Historical price trend
and outlook

Supply context and
availability insights

SUSTAINABILITY

How sustainable is it?

Data: WWF Save Our Seafood

WWF sustainability
classification

Understand impact on
fisheries and ecosystems

Make choices that support
healthy oceans

COOKING INTENT

What are you cooking?

Data: RecipeDB +
SukaSeafood matching logic

Personalised seafood
recommendations

Matches with your
cooking style

Highlights suitable options
for your meal

FUTURE / ITERATION 2

What will the ecosystem look like
if I keep choosing this?

Data: Ecosystem models +
fisheries impact projections

Ecosystem models simulate
impacts of your choices

See how your choices affect
fisheries over time

Encourages long-term thinking
for ocean health

COMPARE / SMART SWAP

What other choice could I make?

Data: Aggregated alternative matrices

View alternatives

Compare impact

Make a smarter swap

Compare sustainability
and impact

Find better value
alternatives

Choose smarter
for you and the ocean

ITERATION 1 — FOUR MUST-HAVE EPICS

Epic 1: Seafood Discovery IDENTIFY

Help users discovery and identify seafood using computer vision with confidence.

Epic 2: Sustainability UNDERSTAND

Provide sustainability insights and why they matter.

Epic 3: Price Intelligence CONTEXTUALISE

Show real-time price, trends and supply context.

Epic 4: Cooking Intent MATCH

Suggest the best sustainable seafood based on cooking intent.

ITERATION 1 FORMS A COMPLETE, COHERENT USER JOURNEY

BUILDING IMPACT, ONE ITERATION AT A TIME.

ITERATION 1 (Foundation)

**Identify +
Understand +
Contextualise**

Search seafood → sustainability →
price context

ITERATION 2 (Better Choice)

**Compare + Match
+ Explain**

Refined identification + smarter
cooking intent + Smart Swap +
Marine Context

ITERATION 3 (Reinforce)

**Act + Repeat +
Understand Impact**

Choice Journey + Demand-Side
Impact Simulator

Iteration 1

proves the
decision-support loop.

Iteration 2

helps the user
make a better choice.

Iteration 3

helps the user understand
and repeat that behaviour.

FUTURE EPICS: PROGRESSIVELY CLOSING GAPS IN THE USER DECISION JOURNEY.

Epic 1.2

Seafood Identification – REFINED

Improves computer
vision accuracy and
confidence.

IDENTIFY

ITERATION 2

Epic 6

Marine Context – NEW

Explains the wider
ecosystem, biodiversity
and Malaysian marine
context behind the
seafood decision.

UNDERSTAND

ITERATION 2

Epic 5

Smart Swap – NEW

Connects sustainability,
price and cooking
suitability to recommend
better alternatives.

COMPARE

ITERATION 2

Epic 4.2

Cooking Intent – REFINED

Moves from fixed
cooking categories
toward intelligent,
natural-language
cooking intent.

PERSONALISE

ITERATION 2

Epic 7

Demand-Side Impact Simulator – NEW

Shows possible
longer-term effects
of repeated consumer
choices.

ACT

ITERATION 3

Epic 8

Sustainable Choice Journey – NEW

Helps reinforce
behaviour and make
better choices
repeatable.

REPEAT

ITERATION 3

SDG 14 – Sustainable Fisheries

SukaSeafood supports **informed, sustainable** seafood decisions at the consumer level.

We intervene at the consumer decision point

OUR CONTRIBUTION TO SDG 14

SDG 14.4
Sustainable Fishing
Influence seafood demand toward more sustainable fishing choices.

Contributes through:

Epic 2 Epic 5 Epic 6 Epic 7

Enabled by:

Sustainability & Impact Intelligence Smart Swap

Marine Context & Biodiversity Demand-Side Impact Simulator

SDG 14.2
Healthy Ecosystems
Make ecosystem impacts visible in everyday seafood decisions.

Contributes through:

Epic 2 Epic 6 Epic 5

Enabled by:

Sustainability & Impact Intelligence

Marine Context & Biodiversity

Smart Swap

SDG 14.5
Marine & Coastal Areas
Connect seafood choices to the health of marine and coastal areas.

Contributes through:

Epic 6 Epic 7

Enabled by:

Marine Context & Biodiversity

Demand-Side Impact Simulator

SDG 14.8
Knowledge & Technology
Turn fisheries, marine and market data into usable decision intelligence.

Contributes through:

Epic 1 Epic 3 Epic 6 Epic 7

Enabled by:

Seafood Discovery & Identification Marine Context & Biodiversity

Price & Supply Intelligence Demand-Side Impact Simulator

SDG 14.B
Impact & Accountability
Helps reinforce longer-term affects of repeated consumer repeatable.

Contributes through:

Epic 4.2 Epic 8

Enabled by:

Demand-Side Impact Simulator

Price & Supply Intelligence

Supported by recent research: Fisheries Research (2026) & Nature Food (2026).

POTENTIAL INDUSTRY PARTNERS

DEPARTMENT OF FISHERIES
MALAYSIA

Government fisheries authority
with direct relevance to fisheries
information, seafood sustainability,
and industry data.

Direct connection to seafood
consumers and the
point-of-purchase environment.

THE ASK

WHAT WE WANT TO LEARN FROM YOU

DATA

What data or industry sources should
we prioritise to create the most impact?

BEHAVIOUR

What would drive trust and meaningful
action among seafood consumers?

VALIDATION

What would validate this approach
and make it credible for long-term
adoption and scale?

We have a feasible first loop.
We want your help making it valuable.
